Education

Master of Chemical Engineering, Chung Yuan Christian University
Bachelor of Chemical Engineering, Feng Chia University

Certificate

TOEIC (790 score)

Summary

Currently, the software industry is definitely one of the fastest growing industries in Taiwan. My self-taught programming and website design skills has allowed me to learn more about software development. As a former Sales engineer, I was able to understand their objectives and collaborate with teams through good communication skills and advanced marketing survey which I have enhanced over time. This allowed me to maintain good relationship with clients and meet their demands. As an R&D Engineer, the most important laboratory or plant work is to deliver clear information and organized data that is easy to be interpreted by the line operators for clients' requirements, which I found to be very critical in the business. I have also improved to quickly adapt to various positions, become more proficient in English, understand the rich experience in international communication, and maintain enthusiasm for serving clients.
